EDUCATION

front end web dev

University of
Birmingham (EdX boot
camp)

november 2023 - april 2024

SKILLS

JavaScript

HTML

CSS

React.js

Node.js

jQuery

CAREER OBJECTIVE

my secondary school education was centered around IT and since then I've had an interest in anything code and computer-related. As a front-end developer bootcamp student, I have implemented real-world industry best practices across an array of tasks and am currently looking for my next challenge as an entry-level dev.

WORK EXPERIENCE

Front-End student

EdX boot camp (certification through Birmingham university)

november 2021 - current / distance

- delved into HTML, CSS, and JS working on a variety of projects
- focus on UX and UI enhancement and implementation
- implementation of APIs on group projects working alongside other devs
- ES6 and basic node.js usage implemented into projects
- use of libraries such as Bootstrap and React.

PROJECTS

Date Night

Creator

- Created a responsive, accessible, and mobile-first web application that generates recipes based on user-inputted ingredients and desired cuisine, alongside film recommendations through genre and title searches, paired with Utilization of local storage and JQuery implementation
- Utilized tasty API and ott API
- <https://github.com/hpro97/DateNight>

Weather Dashboard

Creator

- The weather dashboard allows you to search a city and displays the current weather alongside a next 5 day forecast, any searched cities are saved up until a number of 5, then they start to be replaced, so instead of typing a city you are able to click a button for ease of use.
- <https://github.com/hpro97/WeatherDashboard>

Personal Planner

Creator

- using libraries like jQuery UI, jQuery, jsDate. The personal planner allows you to organize your day by displaying the current date and using color coordination to indicate whether a time block is in the past, present, or future. It also enables you to keep a local history so that it persists upon refresh throughout the day
- <https://github.com/hpro97/personalPlanner>

Password Generator

Creator

- I created a Javascript file to create a random password based on criteria answered by the user regarding characters used and length.
- <https://github.com/hpro97/passwordGenerator>

Portfolio Page

Creator

- I implemented Bootstrap elements for this project to build upon an existing project without any Bootstrap, I implemented self-built CSS on top of Bootstrap to give the project more individuality whilst keeping it to a minimum to retain the Bootstrap layout. I created a bootstrap navbar with functional links correlating to a bootstrap grid system to display my portfolio of work, using placeholders for future projects, I checked for full functionality across different screen sizes and corrected anything by adding bootstrap classes to minimize media queries. I added comments in both the HTML and CSS files to improve structure making the view more intuitive. The reason for this project was to elaborate on an existing portfolio and recreate it with bootstrap elements to give a more user-friendly and professional feel. All whilst giving me a place to display my work.

SEO implementation

Editor

- i built this project to improve SEO and accessibility to an already developed webpage, by consolidating CSS, adding semantics, and replacing non-semantics to increase accessibility. I added comments in both the HTML and CSS files to improve structure and edited code with minimal impact on functionality and appearance.
